

SPECIFICATION AMENDMENTS

Please amend the specification as follows:

Substitute paragraph 4 at page 5, with the following:

Computer 20 can operate in a networked environment using logical connections to one or more remote computers, such as a remote computer 50. Remote computer 50 and monitor 49 may be another personal computer, a server, a router, a network PC, a peer device or other common network node, and typically includes many or all of the elements described above relative to computer 20. The logical connections depicted in Fig. 2 include a local area network (LAN) 51 and a wide area network (WAN) 52. Such networking environments are commonplace in offices, enterprise-wide computer networks, intranets, and the Internet.

Substitute first sentence paragraph 5 at page 5, with the following:

When used in a LAN networking environment, computer 20 is connected to the local network 51 through a network interface or adapter 156 53.

Substitute paragraph 1&2 at page 9, with the following:

In step 220a the logon program switches to the user's new desktop 222a. At this point, the logon process is complete.

Returning to decision step 206, if a desktop is already open for the user as demonstrated by an associated entry in ODL 208, then step 206 (YES) advances process 200 to step 224. In step 224, a switch is made to the existing desktop thread, followed by a switch to the applicable desktop 222b-c, in step 220b-c. In Fig. 3 there are $N > 1$ desktops as represented by desktops 222a-c.
